EXECUTIVE SUMMARY

Highly motivated M.Sc. Artificial Intelligence & Data Analytics student with hands-on experience in Python, Flask, REST APIs, SQL, and Machine Learning. Eager to leverage technical proficiency and creative problem-solving skills to build impactful software solutions within a forward-thinking organization.

EDUCATION

M.Sc. Artificial Intelligence & Data Analytics – Hindustan Institute of Technology & Science

Chennai 2024 – 2026

CGPA: 9.05

B.Sc. Mathematics – Hindustan College of Arts & Science

Chennai 2020 – 2023

CGPA: 7.54

SKILLS

Languages: Python, Java, SQL, JavaScript

Backend: Flask, Django, SpringBoot, Express.js.

Frontend: HTML, CSS, React.js.

Database: MySQL

AI/ML: TensorFlow, Keras, Scikit-learn, NumPy, Pandas.

Tools: Git, GitHub, Postman, Power BI, Tableau

TECH PROFILE LINKS

Hackerrank – [Profile](#)

Github – [Profile](#)

ACHIEVEMENTS

- Solved 400+ DSA problems across HackerRank (5-Star Gold badge in Problem Solving)
- Led planning and execution of 5+ technical events at department Tech Fest, coordinating a team of 8 students and engaging 50+ participants across coding challenges and ML quizzes.

CERTIFICATIONS

- Tableau – SmartBridge Educational Services Pvt. Ltd
- Python Masterclass – Udemy
- GenAI Powered Data Analytics Job Simulation – TATA Forage

INTERNSHIP

Full Stack Development Intern – Femtosoft Technologies

- Contributed to full-stack web application development across front-end (HTML, CSS, JavaScript) and back-end (Python, SQL), working within a team of 5 developers.
- Contributed to real-time projects and collaborated with the development team to build dynamic web applications.
- Designed and implemented 5 REST API endpoints using Flask, enabling data exchange between the front-end UI and back-end database; validated using Postman with documented test cases.
- Tools used: VS Code, Postman, GitHub Copilot, GitHub.

PROJECT EXPERIENCE

Intrusion Detection System (IDS) using Deep Learning ([Github](#)) |

Tools: Python, TensorFlow, Flask, Pandas, NumPy, Scikit-learn

- Built a multi-architecture IDS supporting NSL-KDD and CIC-IDS2017 datasets for real-time network intrusion detection.
- Implemented a Simple DNN (128→64→32→16 layers with BatchNorm & Dropout) on the NSL-KDD dataset (41 features) for binary classification.
- Designed an Attention-Enhanced DNN (AE-DNN) with residual connections and multi-head attention for the CIC-IDS2017 dataset (78 features), targeting attacks like DDoS and brute-force.
- Handled imbalanced datasets using class weighting; trained with early stopping, learning rate scheduling, and model checkpointing.
- Evaluated models on Accuracy, Precision, Recall, and AUC-ROC; deployed via a unified Flask web interface for real-time predictions.

Feature Flag Management System ([Github](#)) |

Tools: Node.js · Express.js · MySQL · React · JWT · REST API · Git

- Developed a full-stack Feature Flag Management System enabling administrators to create, update, activate, deactivate, and manage feature flags through secure REST APIs and a responsive web interface.
- Implemented JWT-based authentication and role-based access control (RBAC), ensuring secure access for administrators and client applications.
- Designed a normalized MySQL database schema for users, organizations, environments, and feature flags, supporting efficient data management and scalable application architecture.
- Built the backend using MVC architecture with centralized error handling, request validation, and Postman-tested REST APIs, improving code maintainability and reliability.
